

Connecting research. Advancing possibility.

ScholarVault is an Indian company building a research, academic, innovation and entrepreneurial ecosystem. Academic Intelligence connects the tools, people and opportunities behind meaningful research.

01

Research + academia

Practical tools for discovery, evidence review, research organisation and contribution records.

02

Technology + innovation

A platform direction that connects knowledge with institutions, startups, businesses and industry.

03

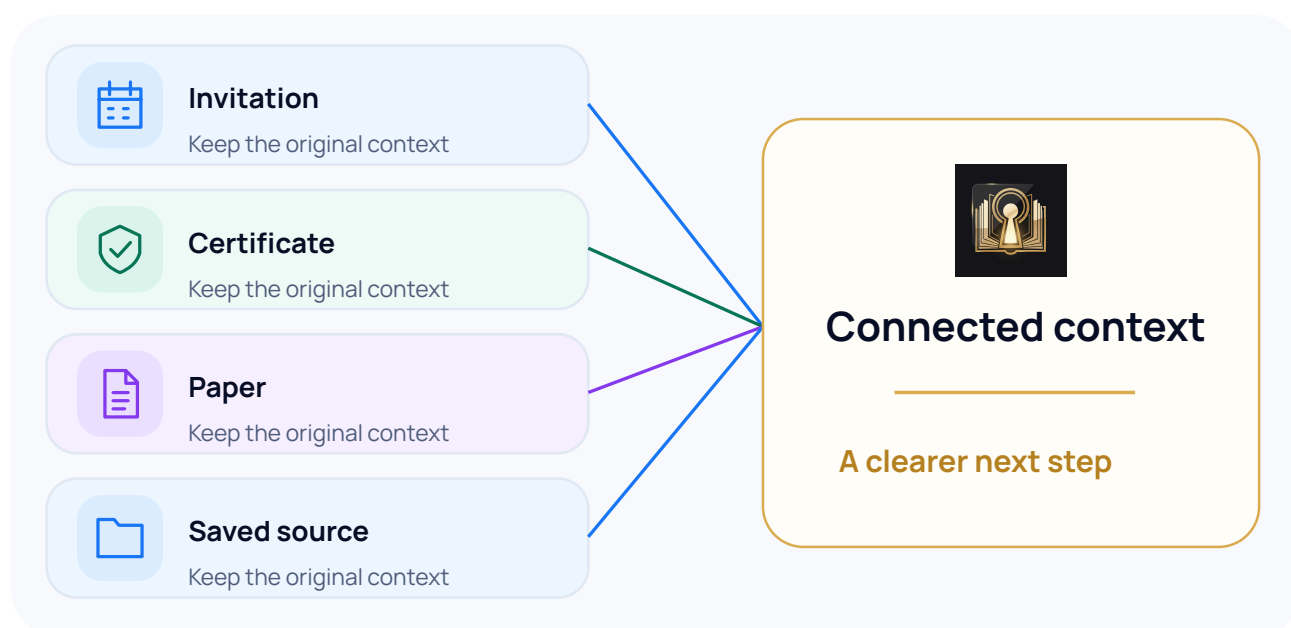

Community + exchange

Conferences, academic programmes and collaborations that bring ideas into the room.

Research deserves a clearer **next step**.

Research work is often spread across invitations, documents, portals and emails. Finding an opportunity is only the start: people also need context, trustworthy evidence and a record of what happened next.

01

The problem

Scattered knowledge, unclear conference claims and disconnected participation records create avoidable work.

02

Our response

Bring discovery, academic trust, research organisation and participation into connected workflows.

03

The wider ambition

Help Indian research connect with global expertise, innovation, entrepreneurship and responsible industry collaboration.

SCVS is a product within ScholarVault. The company is broader than a single tool or conference.

03 / MISSION & VISION

Build infrastructure. Make **knowledge travel**.

Our mission is to create useful technology, services, networks and opportunities for the people advancing research. Our vision is a stronger, more connected Indian research ecosystem with global reach.

OUR MISSION

Build useful infrastructure.

Tools · Networks · Opportunity

OUR VISION

Connect Indian research globally.

People · Knowledge · Impact

Mission

Support researchers, students, faculty and institutions through tools, communities, conferences and knowledge-sharing programmes.

Vision

Connect academia, technology, innovation, startups and business so research can move towards collaboration and impact.

How we build

Start with a defined need. Design a useful workflow. Learn from real use. Expand with clear responsibilities.

Discover → Develop → Publish → Present → Impact is our lifecycle direction, not a promise of publication outcomes.

People. Knowledge. Trust. Connected to opportunity.

ScholarVault's ecosystem starts with people and their work. Knowledge becomes more useful when its sources are clear, contributions have context and the next opportunity is easier to explore.

PEOPLE

Research communities

KNOWLEDGE

Material with context

TRUST

Evidence and accountability

OPPORTUNITIES · RESEARCH LIFECYCLE

01

People

Researchers, scholars, students, faculty, laboratories and academic leadership.

02

Knowledge & trust

Papers, research material, conference evidence, credentials and contribution records.

03

Opportunity

Academic exchange, collaboration, events and future connections with innovation, startups and industry.

Jobs, grants and a wider opportunity network are ecosystem ambitions; specific access depends on the released capability.

Your work. A more **connected** journey.

A researcher needs more than a conference listing. ScholarVault helps connect opportunity discovery with evidence review, research material, participation and the records that support the next stage of academic work.

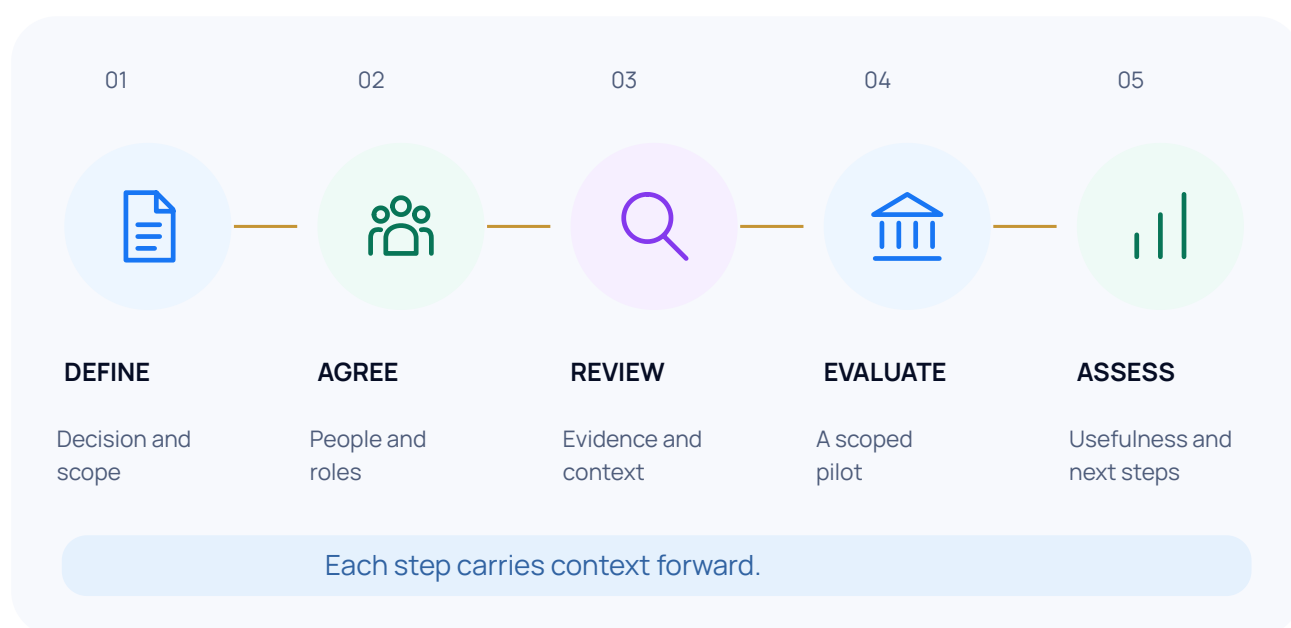

01	02	03
Researchers & doctoral scholars	Faculty & academics	Students & early careers
Find conferences that fit your topic, inspect original claims and organise supporting material before committing a submission.	Bring publication metadata, participation evidence and research context together for a clearer academic record.	Learn due diligence, explore academic exchange and build organised records of supported participation.

Institutional appraisal and publication decisions remain with the relevant institution, reviewer or publisher.

From scattered requests to an **accountable workflow.**

Research offices and departments need context before approving travel, sponsorship or academic participation. ScholarVault supports a conversation around the workflow, people and evidence an institution needs.

Define the decision

Identify the responsibility: conference due diligence, research records, an academic programme or a scoped integration.

Design the pilot

Agree roles, inputs, access, outputs, privacy requirements and evaluation before introducing a departmental workflow.

Review the result

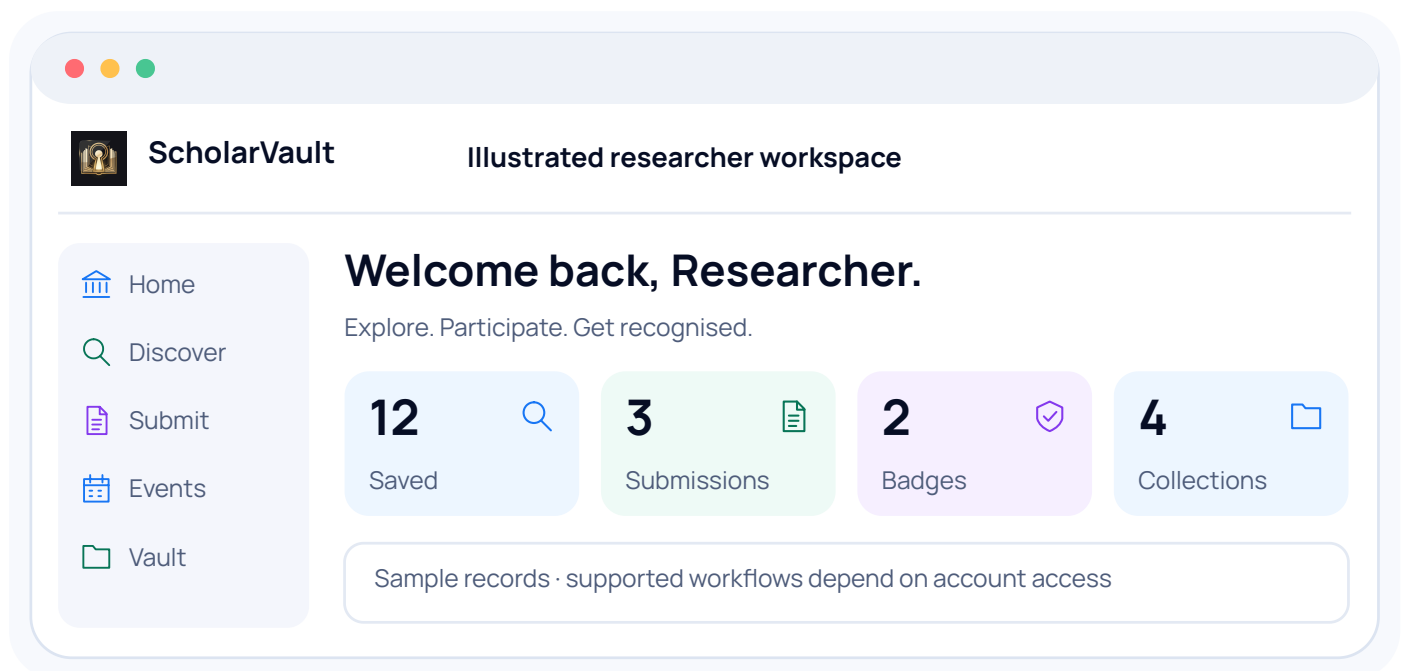

Assess usefulness with the institution. Formalise delivery, support and commercial terms for the agreed scope.

Institutional services use custom pricing. A report supports review; it is not automatic NAAC, UGC or institutional approval.

One entry. Your **academic workspace.**

The flagship website explains ScholarVault. The app is the entry to account-based work: sign in to reach the dashboard and continue your supported research and conference workflows.

01

A purposeful entry

The updated Preview app entry routes signed-out visitors to login and signed-in users to their dashboard.

02

A connected workspace

Navigate discovery, Vault material, submissions, registrations and contribution records according to account access.

03

Return to the wider story

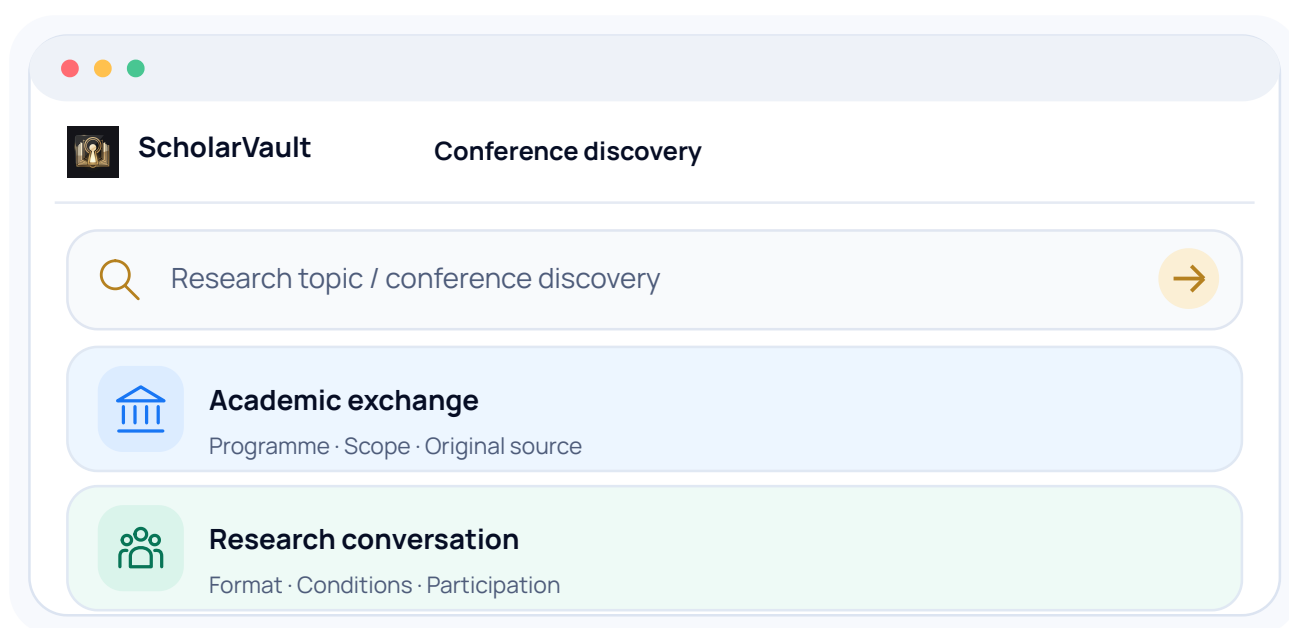

The login experience includes a Main Website route back to scholarvault.in for company, products and resources.

Illustrative dashboard with sample records. Available workflows depend on account access and the released product scope.

Discover with context. Choose **with purpose.**

Conference discovery is part of the ScholarVault workspace. Start with relevance, then read the programme and participation requirements before choosing an academic opportunity.

01

Find the fit

Compare subject, audience, programme, location or format, and official participation information.

02

Inspect the source

Open the organiser's original information. Review submission, registration, publication and refund conditions separately.

03

Keep the next step visible

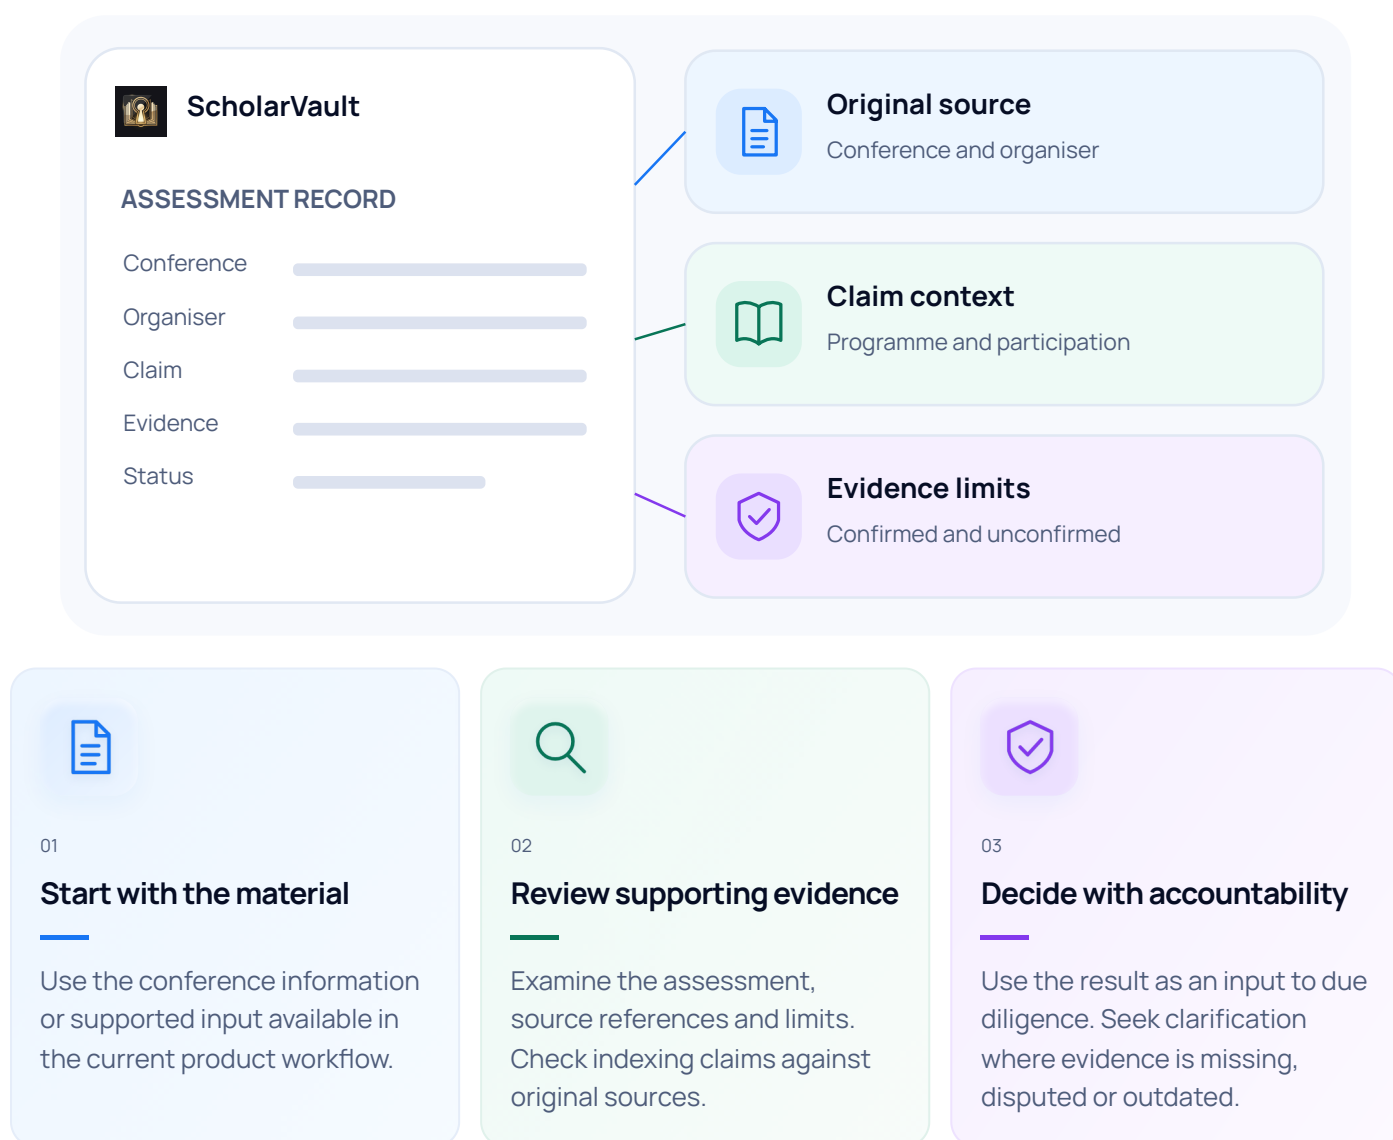

Use the supported account and edition workflows to organise your conference journey and follow relevant records.

Discovery does not certify a conference. A listing and an evidence assessment serve different purposes.

A claim needs evidence. A decision **needs context.**

SCVS brings observable conference information into a structured review. It helps researchers and academic teams ask better questions about an organiser, programme, publication claim and participation conditions.

Assessment is not a guarantee of legitimacy, acceptance, indexing or safety. Source availability and current product scope affect results.

Give useful research a place **to belong.**

Research Vault supports organised research material rather than another disconnected pile of files. Keep supported private documents and imported references distinguishable, grouped and easy to return to.

 **Responsible AI / Project**

Keep project context

 **Literature / Collection**

Organise notes and papers

 **References / Citation context**

Return to the original source

01

Collect

Bring supported documents and research references into your account workflow. Respect rights and confidentiality.

02

Organise

Use project context and supported collections to connect material to the research question it serves.

03

Return & build

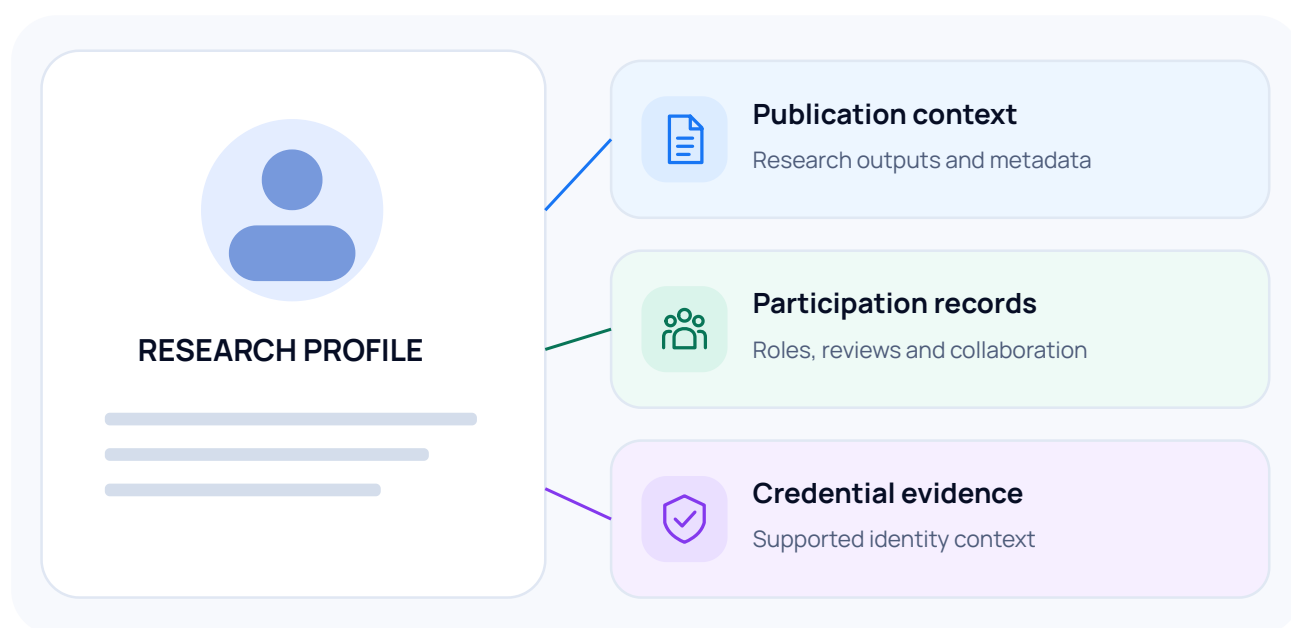

Find the work you collected, retain citation context and prepare the next stage of your research.

Available file types, storage, import and processing limits are governed by the current account and feature settings.

A contribution needs more than **a name.**

ScholarVault's identity direction connects researcher information with publications, credentials and participation context. The goal is a clearer view of academic contribution across the research lifecycle.

Research profiles

Bring supported professional and research information together. Review imported metadata before relying on it.

Academic identity

Connect contribution and credential context. A profile alone is not a universal verified identity claim.

Impact & portfolios

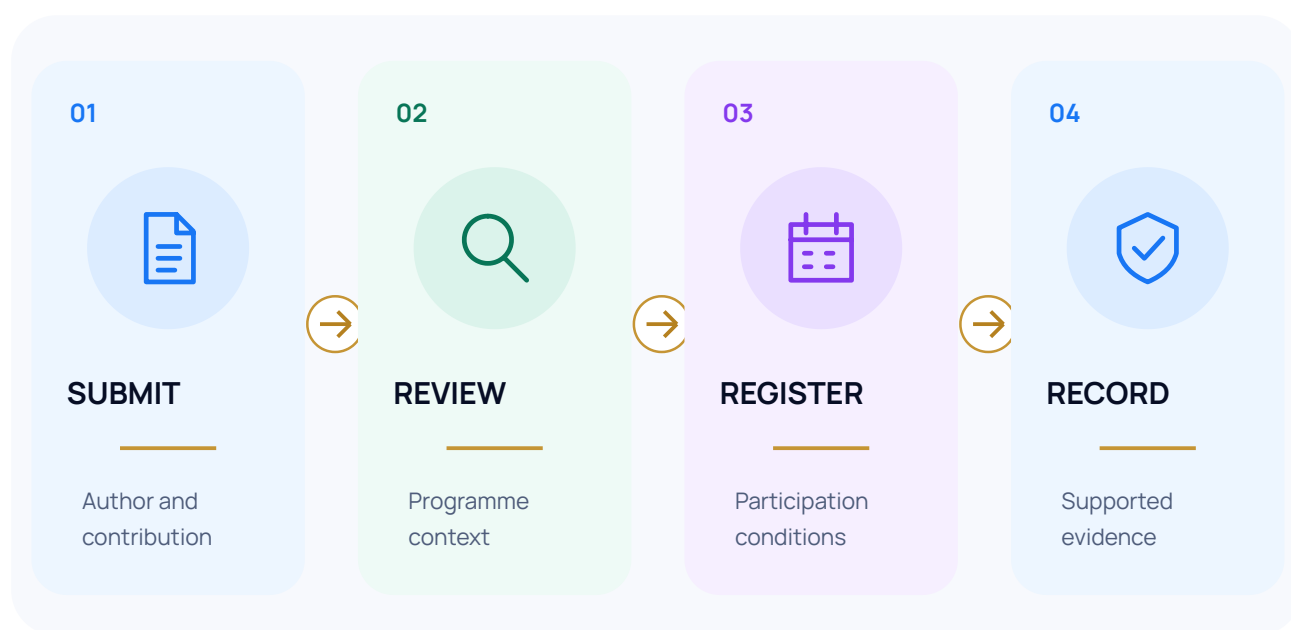

Organise evidence and prepare supported draft records for institutional review; assess citations in their original context.

A public searchable network or independent identity-verification service needs its own defined release scope.

From submission to a **recorded contribution.**

Conferences bring together authors, delegates, reviewers, speakers and organisers. ScholarVault develops connected workflows around the distinct responsibilities of each role and supported conference edition.

 01 Authors & delegates Follow the edition's official submission or registration process. Keep the relevant reference and status.	 02 Reviewers & chairs Carry out an assigned academic role through the supported review process, with clear responsibilities.	 03 Organisers Coordinate programme and participation records using the available edition tools and agreed operational ownership.
--	--	--

An expression of interest is not a confirmed role. Acceptance, payment and credential issuance have separate conditions.

A visible mark. A record you **can inspect.**

ScholarVault's badge and credential direction makes the underlying context matter. A visual mark should connect to the specific conference, assessment or issued record it represents.

Subject & issuer

What the badge refers to

Scope & evidence

What has been assessed

Date & current status

Record and current status

01

Read the record

Check the subject, issuer, scope and date behind a mark or credential. Review its current status.

02

Keep claims specific

An assessment badge and a participation certificate describe different things; neither guarantees indexing or academic credit.

03

Discuss issuance

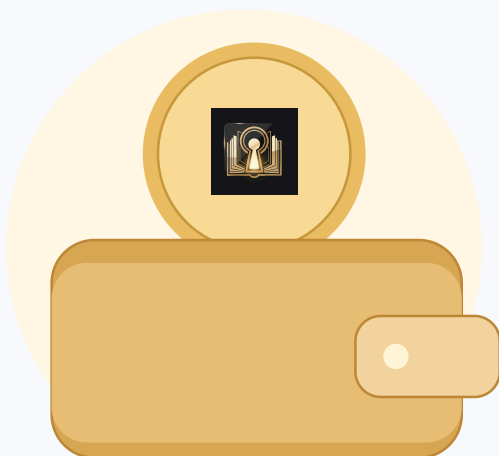

For a conference requirement, agree eligibility, supported verification and issuance responsibility with the ScholarVault team.

The specimen in this brochure is illustrative. No numeric badge tier or universal issuance entitlement is promised.

Testing a clearer way to access **selected tools**.

ScholarVault Credits are being tested as a product access mechanism for selected resource-intensive actions. Credit behaviour and eligibility belong to the current account experience and the published terms of the test.

SCHOLARVAULT CREDITS

Review terms

Selected tools and account

Understand access

Current test conditions

Keep scope visible

Separate from verification

01

Testing

We are testing the user experience and operation of credits. This brochure does not announce general availability.

02

Visible terms

Where enabled, users should review the applicable action, credit requirement and balance before proceeding.

03

Separate scope

Credits, subscriptions and conference registration serve different purposes. Their relationship follows the current product terms.

No credit rate, pack price or included allowance is published here. Refer to the active account experience for the current test.

Connect the workflow to the institution.

API access is a planned ScholarVault product direction, not a current public offering. Future developer and institutional integration workflows require a defined use case, data handling, access and delivery scope.

PLANNED · NOT A CURRENT PUBLIC API OFFERING

Institution

Define the use case

Agreed interface

Set scope and data needs

ScholarVault

Future integration delivery

01

Explain the use case

Describe the system, people, data and decision that an integration will support.

02

Agree the interface

Establish data handling, roles, access methods, supported outputs and operational boundaries.

03

Future delivery scope

Discuss the intended use case with the team. Any future API, licensing or integration proposal needs a separate agreed scope and custom pricing.

Planned capability · No current public API availability, developer access, delivery date or SLA is promised.

Useful services. Defined responsibilities.

ScholarVault combines product development with academic and ecosystem activity. Each service begins with an audience, a purpose and a delivery scope that both parties can review.

Academic programmes

Conferences, workshops, seminars, summits, competitions and knowledge-sharing initiatives.

Institutional collaboration

Scoped pilots, research workflows, conference co-organisation and agreed technology integration.

Startup & industry exchange

Business conferences, entrepreneurship programmes, innovation gatherings and purposeful research-industry connections.

Custom pricing · Scope, support, delivery and commercial terms are agreed for the specific requirement.

Experience behind us. New **conversations** ahead.

ICAHCR has been completed. ScholarVault's next conference direction brings research integrity, responsible AI, bioeconomy, sustainable systems and research-to-impact into planned academic conversations.

MSME registration

Sarvam AI
Startup Program support

Selected institutions represented at prior ScholarVault conferences

MAHSA

Sunway

Manipal

R.M.K. Engineering

Sardar Patel

Universiti Malaysia

01
Registrations

Startup India initiative, StartupTN initiative and MSME registration. These are distinct records, not interchangeable approvals.

02
Programme support

Supported by the Sarvam AI Startup Program. Participation describes programme context.

03
Academic representation

Selected institutions represented at prior conferences include MAHSA, Sunway, Manipal, R.M.K., Sardar Patel University and Universiti Malaysia.

Institution names and logos describe prior representation. They do not imply institutional endorsement or a joint partnership.

Research with a wider responsibility.

Our ecosystem direction relates to selected Sustainable Development Goals through education, useful infrastructure, inclusion, sustainability conversations, accountable practice and collaboration.

Education. Innovation. Inclusion. Climate.

Accountable institutions. Purposeful partnerships.

01

Learning & infrastructure

SDG 4: Quality Education. SDG 9: Industry, Innovation and Infrastructure. Build useful knowledge tools and opportunities.

02

Inclusion & responsibility

SDG 10: Reduced Inequalities. SDG 13: Climate Action. Design for broader participation and sustainability-focused exchange.

03

Institutions & collaboration

SDG 16: Peace, Justice and Strong Institutions. SDG 17: Partnerships for the Goals. Encourage accountable evidence and defined collaboration.

These are areas of intended alignment, not certified impact or UN endorsement. Goal reference: sdgs.un.org/goals.

Built in India. Open **to possibility.**

Founded by Shyam Sundar R in Chennai, ScholarVault is being built around a long-term ambition: connect research, academia, technology, innovation, startups, business and community through useful infrastructure.
